Communicate easily and securely. With IncaMail from the Swiss Post.

Confidential and verifiable.

IncaMail is the user-friendly service of the Swiss Post for the secure and verifiable sending of confidential e-mails.

IncaMail is an easy, flexible and inexpensive way to e-mail – and it's just as secure and verifiable as a registered letter.

Whether you are sending sensitive business information, invoices, terminations or correspondence with government agencies, the patented SAFE technology* will ensure that you reach your communication partner directly and immediately.

The challenges of modern communication:

- **Unprotected e-mails**
E-mails can be very easily viewed, changed or intercepted on the Internet by third parties.
- **High communication costs**
Increasing cost pressure demands alternatives to physical communication.
- **Slow delivery**
Increasing time pressure leads to the search for ever faster communication channels.
- **High investment hurdles**
Time, money and resources for supplementing the established communication channels are lacking.
- **Growing customer needs**
Your customers want to communicate quickly and with the familiar ease of e-mail.

Convenient, flexible, inexpensive. And as secure as a registered letter.

«It is essential for us that data reach the correct recipient securely, quickly and confidentially. We can rely on such factors with IncaMail.»

Tobias Christen, CTO, DSwiss AG

IncaMail offers you a number of advantages:

- **Secure e-mail communication**
IncaMail allows absolutely confidential and verifiable sending of e-mails.
- **Save time and money**
IncaMail helps you communicate more quickly and at lower expense while also saving on process costs.
- **Immediate usability**
IncaMail can be quickly and easily integrated into your infrastructure.
- **Worldwide deliverability**
You can reach anyone in the world via existing e-mail addresses.
- **High customer satisfaction**
Your customers can also communicate confidentially and verifiably via e-mail.

Profit from the following features:

- **Simple handling**
Use IncaMail easily and conveniently from your usual e-mail client.
- **Seamless integration**
Integrate IncaMail into your existing infrastructure or business software.
- **Patented SAFE technology***
Your customers receive confidential e-mails directly in their e-mail inbox.
- **Flexible implementation**
IncaMail can be used via the Web or as a service directly from your infrastructure.
- **Recognised by the Swiss Confederation**
The Federal Department of Finance recognises IncaMail as its official platform for the secure delivery of emails.

*Patented Secure Attached File Encryption technology

Register now at
www.post.ch/incamail.

Send e-mails confidentially and verifiably.

Your message is guaranteed to arrive with IncaMail.

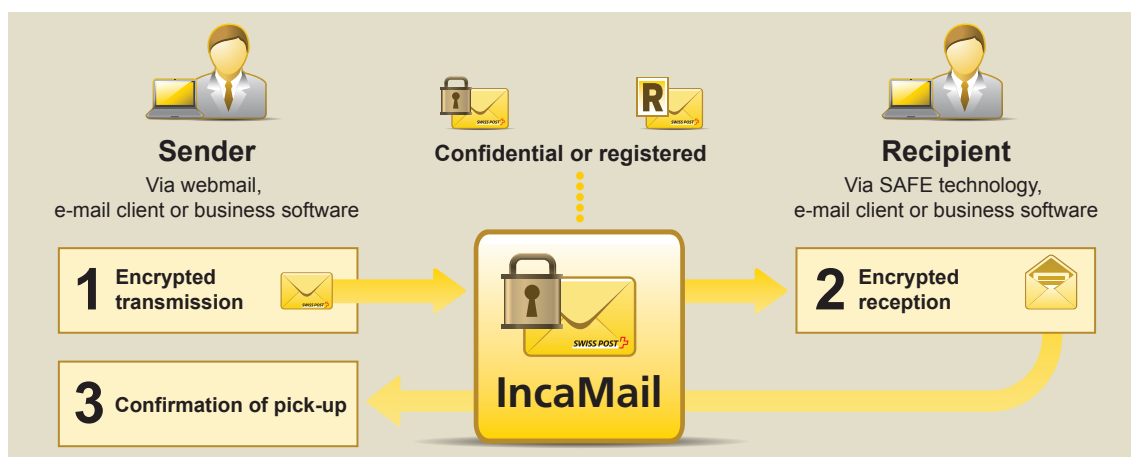

With IncaMail, you have a solution for easily engaging in confidential communication. The recipient needs only an e-mail address.

E-mailing with IncaMail is easy

The sender sends his message via the Web application, e-mail client or business software. The message is securely transmitted to IncaMail via an encrypted connection.

First-time registration

During the initial registration, both the e-mail address and the physical address of the user are verified by sending an activation code. In this way, we confirm the identity of the person using the e-mail address.

All other recipients receive the e-mail as an encrypted attachment directly in their inbox and can open this by double-clicking and entering a password (patented SAFE technology).

The sender receives a confirmation of pick-up, and in the case of the Swiss Post Registered option, the sender receives an acknowledgement of transmission and receipt in the form of a signed PDF.

IncaMail offers you the security that you need.

With IncaMail, the Swiss Post offers you the security that you need. The four letters INCA stand for the four security features of IncaMail:

for Integrity:
The messages remain unaltered. IncaMail ensures that your data is not changed during transport.

for Non-repudiability:
Sending and receipt are verifiable. The pick-up of messages is ensured and documented with IncaMail. With Swiss Post Registered, you also receive verifica-

tion as a digitally signed acknowledgement with officially recognized time stamp.

for Confidentiality:
The data cannot be viewed by third parties. IncaMail transmits all data via an encrypted connection.

for Authentication:
The users are securely identified by indication of their e-mail address as well as physical address during the initial registration and by entry of the corresponding activation codes.

Use IncaMail however you like.

Via Webmail, service, gateway or software.

Simple and flexible integration.

Regardless of whether you send e-mails via Webmail, from your e-mail client or your existing business software, IncaMail can be easily integrated into your familiar environment.

Webmail

IncaMail can be used directly via Webmail for sending and receiving e-mails – no matter where you are. Receipt takes place via the patented SAFE technology (Secure Attached File Encryption). The actual confidential message is integrated into a normal e-mail as an encrypted attachment. The advantages here is that you will always find the e-mail right in your inbox and the message is not temporarily stored on the IncaMail server.

Service

Use IncaMail from your existing e-mail client via the IncaMail service and IncaMail add-in (e.g. Microsoft Outlook or Lotus Notes). The e-mail infrastructure connects securely to IncaMail (TLS). Confidential e-mails are sent to IncaMail over the secure connection and normal e-mails continue to travel directly over the Internet.

Gateway

The IncaMail gateway can be integrated directly into the mail infrastructure of your company and operated from there. Confidential e-mails to other gateway

users are then exchanged directly, plus the gateway constantly ensures the connection to the IncaMail server. The gateway technology also offers the capability of digitally signing e-mails with user certificates. The interface for SwissSign certificates is fully automated. The IncaMail gateway will be available as of mid-2011.

Software

Thanks to the IncaMail business software interface, you can send and receive confidential e-mails and Swiss Post Registered directly from your existing business software. The following providers have already integrated IncaMail into their software or are in the process of realizing such integration:

- **Abacus:** Sending of wage statements
- **Soreco:** Sending of wage statements
- **Abraxas Juris:** Sending of court submissions
- **Delta Logic:** Sending of court submissions
- **SEPPmail:** Sending of Swiss Post/eGov Registered
- **Totemo:** Sending of Swiss Post/eGov Registered
- **Canon:** Sending directly from multifunction printers/fax machines

Contact us as a business software developer to learn more about integrating IncaMail into your software – at www.post.ch/incamail.

«Thanks to IncaMail, we can electronically send important documents confidentially and verifiably. With a partner that our customers trust.»

Claudio Hintermann, CEO, ABACUS Research AG

Work more simply and efficiently. Individual solutions for your industry.

Regardless of your industry, IncaMail can be fully integrated into your existing processes and will help you make these processes simpler and more efficient.

Would you like to communicate with customers, suppliers and business partners quickly and easily by e-mail without sacrificing security and confidentiality? Then IncaMail is the right solution for you. With IncaMail, you can communicate as quickly and easily as by e-mail and as securely, confidentially and verifiably as by physical mail. Plus, IncaMail can be simply and flexibly integrated into your existing infrastructure.

Government

With IncaMail, government agencies can communicate quickly and easily with citizens, companies and other agencies. For example, IncaMail can be used in court communication as a secure transmission platform for satisfying the requirements of the Document Delivery Ordinance, or a government agency can use IncaMail for secure electronic communication with its customers. Information and court decisions arrive securely at the right recipient with IncaMail.

Finance

Financial institutes can also profit from fast and confidential communication with their customers and partners via IncaMail. Easily send account balances and invoices via e-mail directly from your existing business software. Comply with the preference of your customers for e-mail as a simple yet secure form of communication. And use the standard e-mail format for direct communication with partners and government agencies.

Insurance

Insurance companies use IncaMail to reach their customers and partners quickly, easily and with absolute confidentiality. Thanks to the patented SAFE technology, no intermediate storage of the message on IncaMail servers is required. The message is sent quickly and without complications, even without an additional password or PIN. IncaMail can also be integrated easily into your existing infrastructure – and the initial costs are low thanks to the service architecture.

Healthcare

Speed and confidentiality are important factors in healthcare. With IncaMail, doctors, clinics and other health institutions can communicate as quickly, securely and verifiably as by physical mail. For example, you can send patient data securely and verifiably to the recipient of your choice. Communicate easily and confidentially directly from your e-mail client. And send secure e-mails to any e-mail address, worldwide.
